

FLASHLUBE PROTECTS LPG VEHICLES

LPG is a dry burning fuel and burns at a higher combustion temperature than petrol and it does not contain any wear reducing additives as petrol does.

The lack of valve lubrication combined with the higher combustion temperature of LPG can often result in the premature failure of valves, cylinder heads and exhaust systems. This is known as valve seat recession and as a result, the lubrication and protection of the valves and valve seats are vital.

The heat of ignition burns off the oils, and the lubricants then bond to the metal. Since the coating builds up, the more you use the product, the more it protects the engine. As gas standards and composites can vary batch-to-batch and it is vital to minimise the damage.

In order to ensure that engines do not suffer from valve seat recession anti valve wear additives should be added to LPG to lubricate and protect the valves and valve seats.

Vehicles that are originally manufactured with gas fittings are built with hardened valve seats and do not encounter this problem. Some petrol engine vehicles also have these types of seats but this can change model-to-model and year-to-year.

The majority of vehicles have soft valve seats, which will suffer from corrosion and wear unless treated with a lubricant.

The solution is the Flashlube valve Saver Fluid and Kit at \$75. The installation can be completed in 15 to 30 minutes in most vehicles and the replacement Valve Saver Fluid retails at \$19.95 for a litre.

Flashlube Valve Saver Fluid is automatically injected into the inlet manifold. No cutting of fuel lines is required. One full reservoir (400ml) of Flashlube Valve Saver Fluid lasts for up to 4000km. All fittings are silver soldered and made from brass and copper to prevent corrosion.

The Flashlube Valve Saver Kit is guaranteed for 10 years and is fully automatic, maintenance free and suitable for any car, 4WD and truck. The kit comes with full instructions and can be fitted by any mechanically minded person or a registered LPG fitter.

LPG Techniek Van Meenen – IMPORTER OF FLASHLUBE

We are searching for new dealers.
